LUV

1.)

Giving birth to an infinite impetus - which might be best referred to as technology - was conducted by us. Starting from the Industrial Revolution, humankind started to make various machines to be served for an endless easiness and take a seat for a while to have some rest in busy everyday life. In the case of this expression, since then, there was no _____. Taking over places where humans had to be, machines were rather trustworthy than to be having numerous problems. Having a much more sophisticated process of making products, processing much faster with almost no defects, and working for a much cheaper cost (or none at all) was what to be called the most advantageous aspect of machines - or technologies. As years pass by, starting with those who cannot live without cutting-edge technology, it started to show off those who are overwhelmed by scientific development to behave as passive agents of technology. The problem of taking a self-indulgent attitude has risen above the surface.

1) freedom to choose by their own will
2) leeway to pass through massive industrial systems
3) passive agent who only seeks for cutting-edge knowledge
4) single person who gives attention to scientific development
5) common goal for making another impetus at all

2.)

The versatile individual making unambiguous improvements to the overall ambiance in the workspace is still an ongoing idea for a few scholars which might be referred to as an obsolete way of thinking by others. Though commensurate employees playing single games might be significant to provide a successful profit-making system, a collective structure can vest collective wisdom in a general environment - they say. In modern cases, pseudonymization or being in an anonymous state in a company's online community space can induce a chaotic network since it can make individuals assert novel ideas that might produce incremental net profit somewhen. Escalating those incorrect assertions to study in all its aspects, might be the problem of being educated in a group network for decades (in schools), putting one never by himself to be left out of the jungle. To remind, teachers calling students to settle problems given out as assignments have told us to make sure to have solutions in congregated form. In most cases, inducing disorder to lower efficiency was taken mostly in that environment. As well as the foregoing situation so is the company's environment. _____.

1) Indecisive factors are widely produced by individual network
2) Rendering individual tactics to an overall structure is necessitated
3) Private sectors of secrecy is important in all cases
4) Mass psychology can produce wise answers above all
5) Generally produced atmosphere must be taken as an active agent

3.)

The invention of a distant network -which can be referred to as the Internet- was the first step to advocating for the right to communication for every participant living in innumerable countries. Perceiving the internet as a tool for communicating and finding essential data, the floods became a trepidation to each individual but not in the size of a country or social institutions. From the view of social perspective, there were immense advantages to letting one monitor others' status quo and expect how to treat others in the next step. Not only belonging to discrete individuals or particular institutions and being commonplace was what could be the pro-side of the worldwide web. Taking the example of individuals, however, though there might be a chance to talk -or chat- with distant people or even in other countries, it became possible to be themselves in a deficient ethical state behind the property of the web spaces. Problems that had risen above the surface were especially that the internet was characterized by pseudonymization so being in a(n) _____ by being hidden in the barrier of nicknames and other obstacles. Compunction had no chance to be in each species in the internet world even though they conducted a tremendously offensive attack on others. The attackers happened to be in bond, while the victim had no place to lean on.

1) possibly unethical state while conversations
2) misunderstood state caused by text
3) emotionally wounded state by conversations
4) sensitive state with regulations spying on them
5) sentimental state caused by attacks on others

4.)

Poverty is a slowly emerging consequence of what is commonly known as a "practice," which refers to a social convention that the majority of individuals in society engage in. The contamination may occur gradually and appear to have no immediate negative effects, but it ultimately puts every stakeholder in a precarious state in the long run. The term "practice" is not related to culture or social convention but to economic circulation, which can become a vicious cycle. This cycle is subject to currency and monetary businesses that take place worldwide every second, affecting everyone's assets and financial well-being. In the face of economic stagnation, governing bodies must act _____ and decisively to prevent the depletion of citizens' valuable resources. If a vicious economic cycle takes hold, control towers must take measures to mitigate the damage. The more rapid far better, as prolonged inaction could result in dire consequences eventually leading to the congestion of worldwide currency.

1) swiftly
2) wisely
3) slowly
4) irresolutely
5) widely

5.)

Although technological inventions have been used as a tool for approaching the integrated principle of the whole universe, paradoxically, it couldn't explain tiny scales such as what we are consisted of, and how we survived throughout the whole time in societal aspect; however the technologies progressed, it was impossible to present mechanisms of human cultures and other societal behaviors by some formula and other equations made by technologies. Until the previous modern days, it was clear that there exists an unambiguous partition between humans and technological inventions -such as computers, which turned out to be different since the advent of highly- developed Artificial Intelligence, or AI. Deeply consumed in every place where humans wanted their every assistant wanted to be, it became a(n) _____ factor to all humankind as it made them act as an agent that gets what their master needed. Currently accumulating databases of how each activity in a particular interaction, and the response would be considered as a prerequisite of their intellectual development of themselves, the ever-lasting information-receiving situation makes them themselves an unprecedented level of intelligence-seeking creatures.

1) non-essential
2) indispensable
3) marvelous
4) insignificant
5) trivial

6.)

What if the doomsday of the world is not left so far but only to be in 3 days? What if every particular object's properties are gone in a few days? These kinds of imaginative thinking might be an impetus to drive you and others toward the ideal world where every property and the lovers won't be gone with security reserved everywhere and stable economics prevalent in the world. However, overall comprehension of reality might be the tool for pioneering the ideal world as well. The capacity to manage those two contrary subjects is what is known as a crucial point to handling the group's goal to let it "turns out to be true." In case you have one urgent situation to suffer from the fact that the unilateral way to think is the only thing you could do due to the scale of a group that might cause you to feel social pressure, you ought to know that the ideal is not that far from your imaginative thoughts and a practical way to reach the goal can be established from a calm analysis of the current situation. Put simply, the _____ view must be a handful of tools to gain the happy end of the game.

1) arrogant
2) conscious
3) assured
4) concise
5) compulsory

7.)

A marked contrast from past million years ago, humankind has developed to mesmerize others to make their statements have public confidence above all others' opinions. However, words cannot catch the advantages overall as it only describes factors with no chances to make others be part of their group at all -early humans would have said. What to be underlying is which can be pointed out as crowd psychology in case you have to make ordinaries to advocate for your standings, or, a political statement. In the case of early homo sapiens, they would not have been able to think of themselves as political creatures in and of themselves, acting as if they had no kind of groups to speak to. They wouldn't have been able to treat others as the dominant factor of their political standing, ultimately living on their own but with a group. However, in modern cases, this would not be a genuine fact as there are so many people trying to show themselves to each other to get votes and advantages over others. An easy example is a domino, modern humans who want to make others vote for themselves have to push down the smallest scale domino (one individual to be persuaded) first and postpone pushing down the biggest scale (most of them nodding to your words) at last, taking slow motion to have others follow my words. Our ability to _____ became a crucial factor to overall success in modern days, especially in political aspects.

1) make public opinion
2) persuade others to have communication
3) let others gather around to each groups
4) make others be passive bystander
5) communicate with each other

8.)

Redundant issues hanging on the barrier of social hierarchism are playing a massive role in putting societal satisfaction in the lowest figure as it might harness the avenue of compulsory policies since ordinaries have no option but to conform to governmental suggestions. With few people asserting that there is no room for such problems as the societal boundary, ignorance of the alarming status of society got spread widely, which made most people not perceive the reality of people being ordered vertically according to their status, authority, power, or importance. To a range of extent, individuals playing as active agents in eliminating those vertical behaviors became a rising issue. As every individual is a critical participant in forming the societal perspective of others, each individual has the burden of discerning _____ of all individuals to have those corrupted practices abolished. To a common extent, the prevalence of social hierarchism is a significant hindrance to the formation of a fair and reapable society, which leads people to feel that they have much more incentives and motivations to work, teach, direct, and so on. By working together for a move of level positioning, there is no doubt it would be the new impetus for newly-developed, yet adopting the old's positive ones society.

1) what to be deemed as intruding on the horizontal equalism
2) what to be seemingly eradicating common sense
3) what to be rather considered reapable
4) what to be considered neutral to have incentives
5) what to be making individuals to be motivated

9.)

Widespread scientific knowledge should be seen as a conscious viewpoint that occupies the highest place in our minds. However, how an external stimulus is addressed may be misguided, whether through ideology or religion, leading the public to become ignorant and fall into a blindfolded state again. Mesmerizing ideals and conventions used by elders to defend their positions on what should be changed can be a multifaceted problem. They may have a good position, but they also risk _____. Elders, who possibly have much more knowledge about natural beings, developed their so-called inventions based on scientific reasoning, making another leeway for setbacks and letting opponents - still the same humankind - backfire on what they had advanced. Nowadays, technologies built on science have much more negative distortion, since they appear to drive toward the end of an era, with an infinite impetus, inducing excessive manipulation of resources. To stop this malignant repetition, individuals who have critical perspectives on societal issues, associated with scientific innovations, are expected to help us develop wisely by manifesting our society's wrong views and reconsidering new facts, even if they seem unkind at first.

1) themselves getting on the collapsing society
2) perpetuating a vicious cycle
3) maintaining what they had been doing
4) civilizing their cultures to a wider extent
5) longing for a malignant cycle

10.)

Those who have no idea of how to manage themselves to handle the given problems that go beyond their capacity would be likely to insist that _____ forms of communication might be the best method to address complex problems with a complicated causal relationship, besides the reality that they won't be able to have multiple avenues to control the problem except for the meaningless arguments. Complex problems that ought to be thinking possible consequences might be confusing and make the groups' standings much less than each individual's sum of abilities as they would have problems as mentioned. In the case of having multifaceted problems, they should be able to think much more precisely than any other simple problems. In terms of the word 'precisely' should be able to address much more complicated subsequent results as it might appear them to have accountability for what they had asserted, provoking them to have a much lesser possibility to claim for what they might consider as the resolution of the problem. The answer might be to have individuals work by themselves, to reduce the dilemma of problem-solving processes.

1) congregated
2) individual
3) precisive
4) isolated
5) separated

11.)

Without constant supply of various concepts, we would likely be conservative agents to put off considering adopted options to be centered. Individuals having a range of views would induce themselves to acknowledge and seek for the status quo to be advanced. It is not to say that it would be the sole factor to lead them to have a wider perspective but to say that it is a cooperative factor that might be in a mutual interaction between the range of views and one's flexible _____ of the condition of the overall situation. In terms of being provided instant resources, individuals ought to perceive themselves in an objective view, trying to set apart the multifaceted characters in separate places, making room to enhance the chance of making pros and cons to a greater degree, with distinctive methods to address each other. Not only with being provided resources, but also due to the discrimination, we would have much higher possibilities to take what we sought.

1) operations
2) segregations
3) acknowledgements
4) managements
5) reasoning

12.)

A definite _____ between academic achievements and local competence exists, as the accomplishments outside the educational experience would be assessed with competence based on experiences. Not to say that curriculum has no virtue from a general perspective, but to put the educational deeds as subordinate since it would have no direct relevance to the actual accessibility to achievement outside the previous domains. To the extent of education, various subjects would make confusing moments to let oneself choose what they ought for but also to make himself skeptical for having innumerable works to do even before they had decided what to aspire for. Even not for the fact that it would put one to be frustrated, those subjects have little coherence to one's goal as those would have incompletion in and of themselves and unilateral ways of implantation. It would be ideal to have oneself achieve what one had sought through utilizing what one had learned, while one would likely state it as a matter that should be reconsidered after all, as one knows that academic perspective and experiences would not have remarkable effects.

1) involvement
2) continuity
3) relatedness
4) void
5) subsequence

13.)

With the issue of excessive use of smartphones, we, as humankind, faced problems of _____, which cannot be called simple problems, but matters of intricate complexity. It would be a byproduct of digital advancement, thanks to the scientific research and hard work of engineers, while the problem would be likely to be put as misuse by individuals. Not only the matter of abusing smartphones but also could be explained in terms of a network. Active networks established in various fields, they have positive effects such as enabling individuals, or those institutions to have precise statistics, which can let the public have a much better resolution of their problems faced. But in case of misuse, innumerable amounts of properties got influenced, with distortion of the credibility of the institution. To a smaller extent, individuals might have overused to introduce countless diseases. It does no doubt to say that in terms of scientific, digital aspects, it caused dramatic effects to found a worldwide network, but in case of narrower views, such illnesses and avoiding oneself the institution to not let oneself be the credulous one would rather cause themselves to have a gap between the government and themselves, eventually making publics to be in further distances with the advent of smartphones.

1) diversification
2) division
3) intervention
4) interference
5) configuration

14.)

Inner thoughts, overall, are hindered by common knowledge, which is fashioned by the gathered single knowledge. To be an active player in the endless improvement of collective perspective, we should be aware that significant progression in liberal arts took place to induce the development of common sense. Common sense, which illustrates the average knowledge of the public, has a far-reaching position in choosing what to do and how, etc. Thanks to the development of not only the liberal arts but also the major subjects, people have become able to consider how to manage themselves to prefer things that fit the collective wisdom. It might be a question that what kind of correlation between collective wisdom and liberal arts exists, but it does no doubt say that there is a definite relationship between them, as liberal arts form individuals' knowledge that eventually gathers around to make conventional wisdom. In the case of gathered senses becoming a common idea, while it would be efficient, it is still unknown if it would indicate the consciousness of each individual in precision. As to be an active agent seeking the natural perspective in and of itself, it would be crucial to have a wide range of visions that puts the individuals to an end in itself regardless of the common ideas, etc. In conclusion, while common knowledge is decisive, it should _____.

1) not override individuals' perspectives
2) ensure individuals to form collective wisdom
3) be related to the individual senses
4) not engage with liberal arts
5) be considered critical to the liberty

15.)
In academic writing, it would be essential to have a formal tone, with plausible reasons to support the main idea. With an intriguing introduction, the writer starts the paragraph with coherent logic, with consistent effort to keep the style equal. Not too convoluted, but a thought-provoking passage would be the best one likely to be praised by the readers. To manage writers themselves to make the words cohesive, they should try to point out their ideas without logical errors, while handing out sensible reasons and examples with clear voices. Readers would have an altered perspective on the given material as they would be influenced by the writer's words. It might cause an issue since the readers would have no idea if the given definition of the material would be reasonable and makes sense with legitimate support. While there are various pieces with logical senses, there are also those that would blind the readers since the writers know that the readers would be passive when they read the article they wrote. Readers should have _____ views as there is a chance for the pieces to make misunderstandings about the material.

1) consistent
2) impartial
3) prudent
4) prejudiced
5) inflexible

16.)
Although having the power to manage time spent on impractical matters is a certain privilege for those present-day people living in a capitalism-based society, not all people are using the most efficient attitude overall, which makes it easy to see that those who would rather suffer from the pit of hard work than have themselves in the comfortable spaces are likely to have the competence over congestions. Seemingly all people have equal time, while the time itself goes differently. Paradoxically, those who have so many things to do, or those who are in the lower level -in general- stand a chance to fashion methods to overcome the facing problems, such as being chased by what they should have already submitted but to solve the problem with efforts, while for those who have relatively sufficient time, or those who are in the higher level, are likely to say that they have higher chances to _____. Those who had already taken over the higher places than others have leisure only for the hindrance of success such as extravagances and gratifications. To the extent of self-management, it is time to be rated in the highest position above other factors to cultivate an impressive persona. No direct connection seems to be between time and having an impression on the public, while there is a disproportionate correlation between time and higher chances to manage oneself.

1) avoid difficulties during congestions
2) spend time for themselves
3) play crucial roles in the specific time
4) manage themselves to be impressive
5) stay in the successful time

17.)

In retrospect in the early stages of socialization, individuals were counting on others to go along with them as they had no idea about the common framework that entails the need to induce individuals to unify. Needless to say, everyone goes through those phases when they have a hard time getting over their obstinate refusal to embrace uneasiness. To regard others as an undeniably important factor when they have to judge how to behave toward others, in the commonly defined sensible manners, they must take their attitude widely open toward the so-called plausible perspective -in terms of individuals. The group's paradigm contains widely applicable norms such as how to act when others approach, greet others in the first meeting, etc. It seemingly has a compulsory manner to make uniformity across society, while it also seems to present individuals to conform to the collective cognitive structure. To the extent of individuals, they would not perceive what they are truly is since they are continuously influenced by the massive logic of the group. True nature, after the early stages are completed, is considered a matter that is inherently _____ to define in and of itself.

1) disrupted
2) integrated
3) intricated
4) imposed
5) connected

18.)

If the ones were likely to have a hard time interpreting the situation with their manuals, the preconceived notions are what provoke them to remind of various manners to address the case before they perceive the lack of their grasp, operating in the process of _____ the experiences and newly embraced knowledge. When individuals are demanded to stimulate their framework to engage with the materials, the cognitive structure takes the stimuli into the process of reconstitution since each people cannot define the materials in and of themselves as their views are already influenced by numerous experiences. Unique views of each people are fashioned in distinctive ways compared to each other since how the perceptual system that has something to do with shaping the given material, applies to the world and how it is defined by individuals differs. The given situation can be challenging for the participants to comprehend from a wide range of perspectives, eventually inducing them to utilize the existing paradigm regarding general efficacy. Undergoing the process of redefining the event, they stand a higher chance to approach the ultimate goal; prompt, yet precise. To get the right idea that goes along with the original perspective, the definition of the problem changes to fit the context of their norms.

1) redefining
2) perceiving
3) accepting
4) intertwining
5) understanding

19.)
A progressive policy with a collective framework that discounts minorities tends to induce breakup in society. Obsessed with the spread of prosperity, freedom has degenerated in the discriminating interaction of societal agreement. Collective wisdom targets most people to blend into the shared idea without respect for those assumed to have no crucial roles in the decision-making process. Participating in the process of addressing critical factors that directly influence the overall atmosphere of the group leads to the ultimate confusion about the vision in case of excluding non-dominant groups. The basis of the prevalent notion in the group stems from the need to integrate various opinions into common sense. With the development of measures to be conscious of what the ordinaries prioritize, the shared framework evolved to play a significant role in giving shape to general opinions. As the world heads toward the congestion of inner conflicts, the advancement of means to collect what citizenry makes voices for _____.

1) demonstrates how hierarchism got formed
2) induces new kind of problem
3) illustrates how discord forms
4) prevents division of groups
5) reveals the paradox of integration

20.)
Dreams or goals are known to be effective, yet, it should not be ignored that it is _____ since they are decisive factors in individuals' envisioning process. Hopes are fashioned through numerous experiences and an individual's subjective point of view; therefore, it is inevitable for the ideals to have distance from others. Others would have gone through different events, leading them to form a unique vision of their dreams, and slightly reluctant views upon others to make negative voices on the different dreams as the experiences they've undergone would not fit into those of others. Though the ideals and future hopes might have some similar connective aspects, it does no doubt to consider that each person should have formed distinctive perspectives. Others' judgment over one's idea is impartial as the basis for judgment forms in distance with every particular. To the extent of individuals, the dreams are ideal and unreal, unknown of their likelihood before it gets realized, at last. The gap between the present and the uncertain future would not allow each people to manage the possibility of being frustrated prudently. However, it is still crucial not to abandon dreams as it would be an impetus for stimulating oneself to accelerate for their dreams.

1) pessimistic
2) unbiased
3) optimistic
4) essential
5) ambivalent
